

## ScholarChip® Photography and Issuance Station

### Features:

Designed for use by organizations managing a large number of members and requiring rapid turnaround in photography and card issuance

Rapid photography and card issuance, with up to 100 photographs and up to 200 cards produced per hour

Compatible with all ScholarChip Smart Card platforms including ISO 14443A/B, 15693 and HID iClass Smart Contactless cards

Compatible with the ScholarChip 3-Tier architecture. Photographs are automatically stored and maintained through the ScholarChip Web Interface. Photographs are also backed up and are made available, subject to security credentials, at entry points and management stations throughout the organization

Supports automatic card issuance

Self-contained, mobile, easy to operate and maintain

Requires no installation; only a network connection

Operates on both wired and wireless networks

### Advantages:

Rapid and secure photography and card issuance for members

Completely distributive photography and issuance

Easy operation and maintenance, requiring minimal training

The ScholarChip® Photography and Card Issuance station makes the management, taking of photographs, and issuance of ID cards, for any size organization, much simpler. The station provides rapid capture of photographs for pre-verified data with rates of up to 100 photographs per hour and may be utilized for both single-issuance and batch card production.
