

Automated card-based classroom attendance saves instructors time and removes variables when instructors are tasked with taking attendance while providing institutions with reliable and uniform data.

Student Location & Attendance App (SALA) provides for attendance taking in non-scheduled groups such as tutoring or instructor focused groups.

Most instructors would agree that classroom attendance facilitates learning in many ways. Research has shown that a student attendance record may be the biggest factor influencing academic success. This is an essential component of improving student retention, performance and accountability for funding.

Retention Services

Classroom Attendance is a component of the ScholarChip Cloud.
An Integrated School Safety and School Operation Service.

ScholarChip® Card-based Classroom Attendance

Students tap their smart IDs onto a reader as they enter a classroom. The classroom readers are a small USB device that plugs into the classroom PC or they can be wall mounted units with a pin pad. The tap of the card automatically registers the student's classroom attendance, including any tardy status. The instructor's interface displays student photos. A tap changes the student photo from gray scale to full color. Instructors have access to additional student information, including building attendance status. Instructors have the ability to override a tap, change a student's attendance status and to approve the attendance data gathered.

Features & Benefits:

Automates attendance, saving time and providing reliable timely data

Improves student's timely arrival to their classes

Increases student accountability

Improves safety

Integrates with all modern student information systems (SIS)

Real-time and historical reporting and dashboards

Accurate reporting for funding and retention

Power over Ethernet (PoE): easy installation and cost effective

Correlating Services:

ID Manager (Issuing the One Card)

Student Location and Safety

Smart Forms

Installs with one PoE cable, attaches to wall or desktop.
